Description

Description for *Eryngium aquaticum*

Eryngium aquaticum is a species of flowering plant in the carrot family known by the common name rattlesnakemaster, marsh rattlesnake master, corn-snakeroot, bitter snakeroot, and marsh eryngo. This plant is native to eastern North America.

Common name	Flower colours	Bloom time	Height	Difficulty
<i>Eryngium aquaticum</i> rattlesnakemaster, marsh rattlesnake master, corn-snakeroot, bitter snakeroot, and marsh eryngo	White and blue	September to October	3.00 to 4.00 feet	easy to grow

Planting and care

Grow in medium to wet soils in full sun to part shade. Will grow in wet soils with shallow water, but will also prosper in garden loams given consistent moisture. Tall plants may sprawl, particularly if grown in overly fertile soils or in too much shade. May be grown from seed.

Sunlight	Soil	Water	Temperature	Fertilizer
Full Sun to Partial Shade	well-drained soil	Medium to wet	high temperature	Apply any organic fertilizer

Caring for *Eryngium aquaticum*

Eryngo (also sometimes called sea holly) grows to 4â€™™ tall. It features basal leaves that are linear to oblong-lanceolate and entire to remotely toothed. The upper leaves are sometimes spiny toothed to lacinate. Tiny white flowers (sometimes with a purplish tinge) bloom in summer in tight, rounded, flower heads.

Typical uses of *Eryngium aquaticum*

Special features: Water gardens, ponds, low spots. Borders.

Culinary use:

Ornamental use: The plant is used for ornamental purpose.

Medicinal use:
