Description

Description for Fargesia dracocephala

Sacred Bamboo is a woody shrub, native to China and Japan, often used in landscaping. Its distinctive double-compound or triple-compound leaves which have lance shaped leaflets are held on multiple nonbranching stems.

Common name	Flower colours	Bloom time	Height	Difficulty
Sacred Bamboo, Heavenly Bamboo, Nandina	Green	May-July.	9 to 16 feet	Easy to grow

Planting and care

An accurate soil test will tell you where your pH currently stands. Acidic (sour) soil is counteracted by applying finely ground limestone, and alkaline (sweet) soil is treated with ground sulfur.

If you order roses from a mail-order company, shipped in the spring as bare roots when plants are fully dormant, well before they have leafed out

Sunlight	Soil	Water	Temperature	Fertilizer
Full Sun	Well-drained soil	Medium	-	Apply any organic fertilizer

Caring for Fargesia dracocephala

- Start with pruning shears for smaller growth.
- Use loppers, which look like giant, long-handle shears, for growth that is more than half an inch thick.
- A small pruning saw is handy, as it cuts on both the push and the pull.

Typical uses of Fargesia dracocephala

Special features: The plant tends to form ever larger clumps. In spring, there are large panicles of small white flowers at the end of stems followed by green berries which ripen to bright red that are held for many months (unless eaten by birds).

Culinary use: leaves

Ornamental use: The plant is used for ornamental purpose.
