Description Myosotis is a genus of flowering plants in the family Boraginaceae. In the northern hemisphere they are commonly called forget-me-nots or scorpion grasses.

Common name: Myosotis sylvatica Victoria Blue ,Scorpion grasses

Color: Blue with yellow eye

Bloom time: April to May

Height: 0.50 to 0.75 feet

Difficulty level: easy to grow

Planting & Care

Forget-me-nots (*Myosotis sylvatica*) are usually biennial. They stop flowering and set seeds with the arrival of summer heat. Small seedlings appear unobtrusively in fall, then bloom the following spring. You may also run across perennial forget-me-nots (*M. scorpioides*), which thrive in boggy sites. Perennial forget-me-nots don't put on as impressive a show as their biennial cousins, but they can flower over a much longer season, usually from spring all the way through summer.

Sunlight: Full sun to part shade

Soil: well-drained soil

Water: Medium

Temperature: 42° F.

Fertilizer: Apply any organic fertilizer

Care:

- Forget-me-nots are easy to start from seeds.
- Just scatter seeds in a shady garden area at the end of summer.
- The seedlings will have plenty of time to settle in before winter.
- You can also start seeds indoors.
- In spring, sow the seeds on the surface of moistened potting soil and keep the temperature about 65 degrees F.

- Once the plants are big enough to handle, acclimate them slowly to life in the outdoors before transplanting them into the garden.
-

Special Feature:

Bedding. Border fronts. Rock gardens. Wild gardens and woodland areas or around ponds where plants can be allowed to naturalize. Interplant with spring bulbs.

Use

Medicinal use:

- Forget-me-not is an herb.
- The whole plant is used to make medicine.
- Despite safety concerns, people take forget-me-not for lung problems and nosebleeds.

Ornamental use:

- used for ornamental purpose.

Note:

for medicinal use.
