Description Wild Asafoetida is a tall perennial herb up to 2 m tall, with large 2-3-pinnate leaves with broad oblong, finely toothed leaflets, and large compound umbels of yellow flowers. Secondary umbels are round, about 1 cm across.

Common name: Peucedanum jaeschkeanum, Ferula jaeschkeana var. parkeriana

Color: Purple

Bloom time: April-June.

Height: 2 m

Difficulty level: easy to grow

Planting & Care

An accurate soil test will tell you where your pH currently stands. Acidic (sour) soil is counteracted by applying finely ground limestone, and alkaline (sweet) soil is treated with ground sulfur. If you order roses from a mail-order company, order early, in January or February (March at the latest). They are usually shipped in the spring as bare roots when plants are fully dormant, well before they have leafed out

Sunlight: Full Sun

Soil: well-drained soil

Water: Medium

Temperature: (70 and 90°C)

Fertilizer: Apply any organic fertilizer

Care:

- Feed plants only sparingly; overfertilization can cause stems to break in the fall.
- You can add diluted fertilizer into the water, though avoid getting the fertilizer near the plant's base; it may help to build a moat in a circle around the plant about 18 inches out.

Special Feature:

Fruiting umbels are up to 20 cm across. Fruit is 1-1.5 cm long by 1 cm broad, flattened with lateral wings. Wild Asafoetida is found in the

Himalayas, from Pakistan to Himachal Pradesh.

Use

Culinary use:

- leaves

Ornamental use:

- The plant is used for ornamental purpose.

Note:

Downy mildew, rust, and powdery mildew can also affect the plants. If fungal diseases are spotted early, spray with a general garden fungicide.
