Planting and care

Image result for sweet woodruff how to grow and care To direct sow sweet woodruff, in early spring simply spread the seeds over the area that you wish to grow them and lightly cover the area with sifted soil or peat moss. Then water the area. To start sweet woodruff indoors, spread the seeds evenly in the growing container and lightly cover the top with peat moss.

Sunlight	Soil	Water	Temperature	Fertilizer
Part shade to full shade	well-drained soil	Medium to wet	70 degree F	Apply any organic fertilizer

Caring for Galium odoratum

To start sweet woodruff indoors, spread the seeds evenly in the growing container and lightly cover the top with peat moss. Water the container and then place it into your refrigerator for two weeks. After you have chilled the sweet woodruff seeds, place them in a cool, lighted area (50 F. (10 C.).

Typical uses of Galium odoratum

Special features: Useful in herb gardens, rock gardens, naturalized areas, shady borders or as a ground cover or edging plant.

Culinary use: The agreeable odour of Sweet Woodruff is due to a crystalline chemical principle called Coumarin, which is used in perfumery, not only on account of its own fragrance, but for its property of fixing other odours. It is the odorous principle also present in melilot, tonka beans, and various other plants belonging to the orders Leguminosae, Graminae and Orchidaceae.

Ornamental use:

Medicinal use:
