Apply any organic fertilizer

Caring for Garlic Creeper

- Native to South America, Garlic Vine is one of the most rewarding, flowering vines that you can grow. Interestingly enough it smells like garlic. However.
- it does not smell if the plant is left alone, only when the leaves are crushed. It can either be described as a shrub or a vine since it produces numerous woody vines from the root that grow only 2-3 m tall and form a shrub-like appearance.

Typical uses of Garlic Creeper

Special features: Vegetable commonly added to casseroles, salads, stir fry, soups and stew, but may be eaten raw.

Ornamental use: The plant is used for ornamental purpose.

Medicinal use:

It is a very common and well respected plant remedy in the Amazon for the pain and inflammation of arthritis and rheumatism, as well as, colds, flu, and fever.

Some capsule products of the leaves are sold in stores in Brazil and Peru, and it can be found as an ingredient in other various multi-herb formulas for cold and flu, pain, inflammation and arthritis in general. Note: The following information is general guidelines. Be sure to ask your healthcare provider for guidelines.
