Description

They are sufficient to cater for most seeds right up to the "planting out" stage. Compact little roots are formed, making transplanting simple with nearly no stress at all to the plants.

However we do recommend "planting out" before the roots become overgrown and start growing "in circles" within the cell! Made of lightweight PVC making it easy to "pop" the plants out when ready.

Tray specification are:

Tray cell type : Round

No. of Cells per Tray : 104

Tray Size (Approx. in Cms) : 54 x 35 x 5 (Length x Width x Height)

Speed germination and seedling growth to produce healthy plants ready for transplant with our helpful and economical germination trays.
