Description

### Description for Golden Rain Tree, Koelreuteria Paniculata

Flamegold is a very popular landscape tree native to China, Korea and Taiwan. The tree is more commonly seen covered with large clusters of persistent rose-colored, papery capsules, which may be mistaken for the blooms. Flowers are small, fragrant, and appear in very showy, dense, panicles at the end of branches. The bark is smooth and light brown when young, becoming ridged and furrowed as the tree matures.

Common name	Flower colours	Bloom time	Height	Difficulty
Chinese Flame tree, Flame gold, Chinese Rain Tree	Yellow	Late summer	30 to 45 feet	Easy

### Planting and care

Sunlight	Soil	Water	Temperature	Fertilizer
Full sun	Average well-drained soil.	Dry to medium moisture levels.	Hardiness upto 25 degrees F.	Fertilize in spring with a tree plant food.

### Caring for Golden Rain Tree

Dead wood is often present in the canopy and should be removed periodically to maintain a neat appearance.

### Typical uses of Golden Rain Tree

Special features:

**Culinary use:** It is very popular for use in everlasting flower arrangements.

**Ornamental use:** Used as landscape tree, used in everlasting flower arrangements.
