## Planting and care

**Sunlight:** Full Sun

**Soil:** Well-drained soil

**Water:** Keep soil moist throughout the growing season

**Temperature:** 25 to 35 degree C

**Fertilizer:** Apply any organic fertilizer

## Caring for Grape

- In the first couple of years, the vine should not be allowed to produce fruit.
- It needs to strengthen its root system before it can support the extra weight of fruit. Pruning is important. Not only would vines run rampant without control, but canes will only produce fruit once. Prune annually when vines are dormant, in March or April. This is before the buds start to swell, but when winter damage is apparent.

## Harvesting

January to May

## Typical uses of Grape

**Special features:** Grape vines not only produce sweet and versatile fruits, they add an element of drama to a garden or landscape.

**Culinary use:** Mature berries and dry berries are used for culinary purpose. Grapes can be eaten fresh as table grapes or they can be used for making wine, jam, juice, jelly, grape seed extract, raisins, and vinegar.

**Ornamental use:** The plant is used for the ornamental purpose.

**Medicinal use:** Grape berries contain vitamin C and manganese.
