Description

Description for Guava, Amrud, Psidium Guajava (Grafted)

It bears attractive bright pink flowers, as opposed to the boring cream white flowers of the usual guava. The guava tree is an interesting plant with mottled greenish bark and long 3 to 7 inch serrated leaves. Guava trees produce white, 1-inch flowers that yield to small round, oval or pear-shaped fruits.

Common name Psidium guajava	Flower colours White	Bloom time Throughout the year	Height 20 to 30 feet	Difficulty Easy to grow
--------------------------------	-------------------------	-----------------------------------	-------------------------	----------------------------

Planting and care

Layers are used as planting material. The planting is distributed from June - December. A spacing 5 to 6m. Plant the layers with the ball of earth in the centre of the pit of 45 cm x 45 cm x 45 cm size filled with FYM 10 Kg neem cake 1 Kg and topsoil.

Sunlight Full Sun to Partial Shade	Soil Well-drained soil	Water Medium	Temperature 20 to 30 degrees C	Fertilizer Apply any organic fertilizer
---------------------------------------	---------------------------	-----------------	-----------------------------------	--

Caring for Guava

- The tree should be planted in well-drained soil where its roots have room to spread.
- Fertilize growing guavas every one to two months while young and then three to four times per year as the tree matures.
- Guava trees need a high amount of nitrogen, phosphoric acid and potash, along with some magnesium for maximum fruit production.
- An example is a formula of 6-6-6-2, worked into soils just prior to the onset of the growing season and then evenly spaced out three times during the growth period.
- Pruning should be done when it grows excess.
- Look for pest attack and apply cure accordingly.

Harvesting

Throughout the year

Typical uses of Guava
