

Hepatica acutiloba - Plant

The flowers of Sharp-Lobed Hepatica bloom earlier than most spring-blooming wildflowers of woodlands. They are delicately attractive and have a tendency to blow about on their slender stems in the wind.

Hepatica acutiloba Plant

Description for Hepatica acutiloba

Plant height: 3 - 6 inches

Plant spread:

This herbaceous perennial plant. It consists of a tuft of basal leaves. Each leaf is palmately divided into 3 lobes; the lobes are oval-ovate and approximately the same size. The upper surface is more green during the summer, but become reddish brown during the winter. A mature plant will produce a tuft of flowers on long stalks during early to mid-spring.

Common name(s): Sharp-lobed hepatica, heart liverleaf, sharp-lobed liverwort, spring beauty, may-flower

Flower colours: Violet to white, sometimes pinkish

Bloom time: Early to mid-spring

Max reachable height: 0.50 to 0.75 feet

Difficulty to grow: Easy to grow

Planting and care

The preference is dappled sunlight during the spring and light shade during the summer. The basal leaves should be left undisturbed during the winter. The soil should be well-drained, loamy, and can contain some rocky material, including pieces of limestone; a thin-layer of decaying leaves is also beneficial.

Sunlight: Part shade

Soil: Loamy, well-drained soil

Water: Medium

Temperature: 21 and 11 degrees C

Fertilizer: Use any organic fertilizer.

Caring for Hepatica acutiloba

- Once planted, additional hepatica plant care is rarely needed, especially if suitable hepatica growing conditions have been provided.
- You may divide the clumps of plants that multiply after the blooms have ceased to propagate them and add to another area in your garden.

Typical uses of Hepatica acutiloba

Special features:

Ornamental use: The plant is used for an ornamental purpose. Its generally keep indoor in a living room and in terrace area.
