Growing hollyhocks (*Alcea rosea*) in the garden is the goal of many gardeners who remember these impressive flowers from their youth. The flower stalks on hollyhocks can reach heights of 9 feet tall! They can tower above a garden, adding a lovely vertical element to your yard. Let's look at a few tips on hollyhocks to help you grow them in your yard.

Common name	Flower colours	Bloom time	Height	Difficulty
hollyhocks	white, light-pink, magenta and burgundy	Summer. A few varieties will bloom well into fall.	Some varieties grow 2 -3feet , while others grow as high as 6 feet.	Easy

Planting and care

Planting hollyhock may be done in spring or fall. Select a sunny location sheltered from the wind.

Try to have the soil worked up at least one week before planting time.

Spring plantings will be safer in areas where winters are severe. Plant as soon as nursery stock is received. If plantings must be delayed, place the hollyhock in a cool, shaded area and keep the roots moist.

Hollyhock seedlings are grown in a special planting mixture to promote fast growth. Do not pull this material away from the roots, but set the top of the planting material level with the soil line.

Firm the soil around the plants and roots by pressing the soil with your hands.

Water well to eliminate air pockets that may form around the roots.

Sunlight	Soil	Water	Temperature	Fertilizer
Hollyhock like full sun.	Hollyhock likes rich, well drained soil.	Water as needed to keep the soil moist at all times.	-	Adding a general purpose fertilizer once a month will result in bigger, fuller

blooms.
