

Hworthia Glabrata - Plant

Haworthias are almost always small and very (very) slow growing plants but tend to look brilliant in unusual containers or interesting soil mixes. As a result they can make fantastic easy care gifts and presents for people, suiting either a home or office desk environment.

Description

Description for Hworthia Glabrata

Haworthia are delightful little succulents that form very attractive and singular small houseplants. Generally easy to grow, the same best practices that yield healthy Aloe and Echeveria plants will also produce beautiful Haworthia.

Common name
-

Flower colours
Dark green

Bloom time
Early summer

Height
2 inch to 8 inch

Difficulty
Easy to grow

Planting and care

Growing in a greenhouse will also provide sufficient light but grown indoors for much of the year can create etiolated, weakened and abnormally green plants. The more light the better, with the exception of full sun for those species that can't tolerate it, or are unaccustomed to (can sunburn severely, and subsequently rot).

Sunlight	Soil	Water	Temperature	Fertilizer
Will take various light conditions, but neither direct sunlight or deep shade.	Well-drained soil	Once a month, however to get the plant thriving it will need to be done at least once a fortnight.	4 degrees C and above	Fertilize during the summer growing season with a cactus fertilizer. Dont feed during the winter.

Caring for Hworthia Glabrata

- Will take various light conditions, but neither direct sunlight or deep shade.
- A surviving plant will get by with watering just once a month, however to get the plant thriving it will need to be done at least once a fortnight.
- Very tolerant of underwatering, but will succumb quickly to rotting if overwatered.
- Feed your Haworthia very occasionally and when you do, ensure it's only a weak solution.
- Average warmth between Spring and Autumn / Fall. Cooler in Winter although if possible, not cold and absolutely no lower than 4 C
- Once the time has come, just choose a pot slightly bigger than the last and use a similar soil composition to what was being used previously.

Typical uses of Hworthia Glabrata

Special features: Use a sharp knife and cut as close to the parent plant as possible, ensure the offset has some roots. Wait a day for the offset to dry slightly (this reduces the chances of the raw "wound" from rotting), then pot up in a small container using a standard potting or cactus compost mix.

Ornamental use: The plant is used for ornamental purpose.
