| Lotus, Water lily | White | - | - | easy |

Planting and care

Spent lotus flower heads form unusual, attractive seed cones filled with large brown seeds with hard seed coats. Collect the seeds when the cones have dried, but don't wait too long or the wind will shake the seeds out of the cones. File the hard seeds slightly to expose the white inside, but don't damage the seed or it won't be able to sprout.

Another way to deal with the hard seed coat for better germination is by soaking the seeds in warm water for a couple of days, then removing the outer seed coat.

| Full Sun to Partial Shade | well-drained soil | Medium | 80 degree Fahrenheit | organic |

Caring for Hybrid Lotus

Your lotus will do best in good quality soil, though they will grow in pure sand or gravel. Some garden centers sell water plant potting mix. Gravel at the bottom of your pot will help sink the planting container and one-inch gravel at the top will keep foraging koi out. Be sure your pot or soil has no insecticide/herbicide residues.

Typical uses of Hybrid Lotus

Special features: Growing Lotus plants is believed sacred in India and other Asian countries as it is believed that proper positioning Lotus plants brings prosperity, peace and serenity to the house.

Ornamental use: The plant is used for ornamental purpose. Its generally kept outdoor and in terrace area.
