Description

Description for Hydrastis canadensis

Goldenseal, also called orangeroot or yellow puccoon, is a perennial herb in the buttercup family Ranunculaceae, native to southeastern Canada and the eastern United States. It may be distinguished by its thick, yellow knotted rootstock.

Usually bearing three maple-like, shiny-green leaves. The stem is terminated by a single, white flower with yellow stamens followed by a tight cluster of red fruit. 1 large, wrinkled, basal leaf and a hairy stalk bearing 1 flower above a pair of 5-lobed stem leaves, all rising from a yellow, underground stem. Lacking petals and losing the sepals early, the flowers of this species owe their color to the many whitish stamens.

Common name	Flower colours	Bloom time	Height	Difficulty
Goldenseal	Greenish-yellow to greenish-white	April to May	0.75 to 1 feet	Easy to grow

Planting and care

Goldenseal can be propagated from rhizome pieces, root cuttings, or seed. To propagate from seed, the fruit must be harvested as soon as it is mature, then processed by carefully mashing the fruit to separate out the seeds. This process can take several days, as the seeds and pulp need to ferment in water until they can easily be separated.

Sunlight	Soil	Water	Temperature	Fertilizer
Partial Shade	Well-drained soil	Medium	95 degrees to 100 degrees F	Apply any organic fertilizer

Caring for Hydrastis canadensis

Store in a cool, dry, dark area free from insects and rodents. Yields per acre can vary drastically depending on production method and location, but generally range from 800 to 3,000 pounds of dried root per acre.

Typical uses of *Hydrastis canadensis*

Special features: Easily grown in average, medium, well-drained soil in part shade. Prefers well-composted soils with lots of leaf mold.

Culinary use: NA

Medicinal use: Modern medicinal uses for goldenseal include the treatment of nasal congestion, digestive disorders, inflammation, and AIDS. Goldenseal is often referred to as a synergistic herb, meaning when taken with other herbs, it increases their efficacy. Goldenseal and echinacea make up a common combination formula.
