Description

Description for Iphigenia, Ran Lahsun

In Greek mythology, Iphigenia was a daughter of King Agamemnon and Queen Clytemnestra, and thus princess of Argos. After offending Artemis, Agamemnon was commanded to kill Iphigenia as a sacrifice to allow his ships to sail to Troy.

Common name	Flower colours	Bloom time	Height	Difficulty
Magnificent Grass Lily	Dark red	April.	0.5 to 3 feet.	Easy to grow

Planting and care

Pale grass lily, while not in flower, is not particularly conspicuous, though occurring naturally in open, sunlit meadows up to an elevation of 7,000 ft. The grass-like plants, 10" tall, stand erect amidst grass. The leaves are slender, sessile and cauline.

Only one-third of an inch wide, the dark green leaves tend to curl out at the ends. The plants have tubers and fibrous roots near the surface of the soil. One can dig in and separate a plant with one's fingers.

Sunlight	Soil	Water	Temperature	Fertilizer
Full Sun to Partial Shade	Well-drained soil	Medium	25 to 28 degrees C	Apply any organic fertilizer

Caring for Iphigenia

- The flowers are like six-pointed stars. The hybrid and cultivated flowers come in several shades - pink, orange and dark blue. The fruit is a three-valved capsule. The porcelain fine flowers are ideal for table tops and window sills. Propagation is by separating flowers during the dormant season and planting them in well drained soil in the sunny area of a garden
