Description In Greek mythology, Iphigenia was a daughter of King Agamemnon and Queen Clytemnestra, and thus princess of Argos. After offending Artemis, Agamemnon was commanded to kill Iphigenia as a sacrifice to allow his ships to sail to Troy.

Common name: Magnificent Grass Lily

Color: Dark red

Bloom time: April.

Height: 0.5 to 3ft.

Difficulty level: easy to grow

Planting & Care

Pale grass lily, while not in flower, is not particularly conspicuous, though occurring naturally in open, sunlit meadows up to an elevation of 7,000 ft. The grass-like plants, 10" tall, stand erect amidst grass. The leaves are slender, sessile and cauline.

Only one-third of an inch wide, the dark green leaves tend to curl out at the ends. The plants have tubers and fibrous roots near the surface of the soil. One can dig in and separate a plant with one's fingers.

Sunlight: Full Sun to Partial Shade

Soil: well-drained soil

Water: medium

Temperature: 25-28 ° C

Fertilizer: Apply any organic fertilizer

Care:

- The flowers are like six-pointed stars.
- The hybrid and cultivated flowers come in several shades - pink, orange and dark blue.

- The fruit is a three-valved capsule.
- The porcelain fine flowers are ideal for table tops and window sills.
- Propagation is by separating flowers during the dormant season and planting them in well drained soil in the sunny area of a garden

Use

Medicinal use:

- Appendix

Culinary use:

- leaves

Ornamental use:

- The plant is used for ornamental purpose

Note:

for medicinal use, please consult appropriate doctor before use.
