Description

## Description for Juhi, Jasminum Auriculatum

Jasmine Molle, which is a beautiful flowering plant and it, is known as Jui in Bengali of Jasmine Molle is Jasminum Molle and Jasminum auriculatum and this needs water regularly but over watering can be damage this plant growth.

Common name

Jasmine Molle, Indian

Jasmine, Jui,Jai

Flower colours

White color

Bloom time

June to August

Height

4 to 5 feet

Difficulty

Easy to grow

## Planting and care

Jui is propagated from semi hardwood stem cuttings. Semi hardwood cuttings are pieces of plant stem which has matured partially after the current year growth. Take 4-5 inches of stem cutting and dip in rooting hormone or water overnight before planting into soil. Cover the container having cuttings with plastic bag and keep soil moist. Jui can be grown from seeds too. Seeds can be collected from existing plant itself once pods dry on plant.

Sunlight	Soil	Water	Temperature	Fertilizer
Full sun to part shade. 4 to 6 hrs of sun exposure is good for Juis good show of growth.	Well-drained soil	Medium	25 to 30 degrees C. Jui like other Jasminum (i.e. Mogra, Chameli ) like warm conditions. It grows best in full sun exposure.	Use normal purpose compost twice a week or liquid fertilizer for boosting bloom.

## Caring for Juhi

- Jasmine plants can be affected by pests like aphids, caterpillar, spider mites, etc. and fungus disease.
- To avoid these problems, always water your Spanish jasmine properly without wetting the leaves.
- Ensure that the vine receives sunlight for 4-5 hours daily.
