Description

Soil conditions are important; soil should be well drained and possess a good measure of organic matter. Ph should be 7 or above, with moisture available at all times.

Common name: Arjuna

Color: White, yellow

Bloom time: Annually

Difficulty level: easy to grow

Planting & Care

Basic process to be followed for planting this, do not overwater plant and apply organic fertilizer once in every 2 months.

Sunlight: Full Sun to Partial Shade

Soil: Well-drained soil

Water: Medium

Temperature: 85° F

Fertilizer: Apply any organic fertilizer

Care:

- You should be able to sow additional seeds every two weeks for a continuous harvest throughout the growing season.
- Fertilize 3 weeks after transplanting.
- Lettuce prefers soil that is high in humus, with plenty of compost and a steady supply of nitrogen to keep it growing fast.
- Use organic alfalfa meal or a slow-release fertilizer.

Special Feature:

Direct seeding is usually preferred, 3 seeds every 8", thinning to one plant every 8" with 10" to 18" between rows. Floating row covers are helpful.

Ornamental use:

- The plant is used for ornamental and medicinal purpose.
