Planting and care

Kalanchoes are pretty low-maintenance plants, thriving in the low humidity of winter households. Choose Kalanchoe plants that have plenty of unopened flower buds, rather than ones in full bloom, and be sure to give them:

Sunlight	Soil	Water	Temperature	Fertilizer
They prefer bright, sunny locations, especially in the summer growing season.	An ordinary potting soil mix is fine.	Water moderately throughout the summer and reduce watering in the winter. Let the soil surface dry out between waterings, and in the winter, the plant can almost dry out. Watch the fleshy leaves for signs of water distress.	They prefer warmth. Do not let fall below 55°F.	Feed bi-weekly in the summer with a liquid fertilizer, or use slow-release pellets.
