Description Kokum is a tree with a dense canopy of green leaves and red-tinged tender emerging leaves. It is indigenous to the Western Ghats region of India, along the western coast.

Common name: Garcinia indica

Color: brownish-gray,

Bloom time: November-February.

Height: 0.5 to 3ft.

Difficulty level: easy to grow

Planting & Care

Garcinia Cambogia has lately grabbed the attention of many health enthusiasts and now when the fruit extract is available under various brand names, you might be thinking whether you can grow it of your own. Definitely it's possible and all you need is lot of determination and little care. If you are from India or Southeast Asia then the natural climate prevailing at your place would support the growth of Garcinia Cambogia but if you are placed at some other region then you have to follow some simple care tips to grow this fabulous fruit in your courtyard.

Sunlight: Full Sun

Soil: well-drained soil

Water: Medium

Temperature: 36 °C

Fertilizer: Apply any organic fertilizer

Care:

- The regular garden soil is not recommended for Garcinia Cambogia, as this soil is more prone to diseases and weeds.
- The tree is adapted to Asian environments and if you plant it in garden soil then there are chances that it dies immature.
- You can make a special potting mixture for this plant by mixing organic compost and garden soil in one is to one proportion.
-

The organic compost would be required periodically even after the tree reaches its full grown stage as this will increase the fruit yield of

the tree.

- This mixture is somewhat same as the soil mixture you see in the rainforests and hence favourable to the growth of Garcinia Cambogia.
-

Special Feature:

The proper care taken during initial growth phase would turn out to be great growth booster throughout. Well-maintained saplings turn into healthy trees and eventually give good yield. Don't forget this is your future and you cannot take shortcuts in shaping your future for sure.

Use

Culinary use:

- leaves

Ornamental use:

- The plant is used for ornamental purpose

Note:

no serious & insects disease problems.
