Kuchla Plant

### Description for Kuchla

**Plant height:** 10 - 16 inches

**Plant spread:** 4 - 6 inches

Kuchala is a slow growing beautiful deciduous to semi evergreen tree growing commonly in shady areas. On an average, it attains a height of 10 to 12 m but grows even taller up to 2m if it gets a favorable condition. Branches are irregular, covered with a smooth ash-colored bark.

Young shoots are deep green, shiny. Oppositely arranged short-stalked leaves are elliptic, shiny, smooth on both sides. Flowers are small, greenish-white, funnel-shaped, borne in small clusters at the end of branches They have a disagreeable smell.

**Common name(s):** Nux Vomica, Poison Nut, Kucchla

**Flower colours:** Greenish-white

**Bloom time:** Cold season

**Max reachable height:** 10 to 12 m

**Difficulty to grow:** Easy to grow

## Planting and care

The fruits are small berry of a size of small orange, brownish yellow in colour, contain a large amount of gelatinuous pulp in which 1 to 5 seeds are embedded. The seeds are disclike, 4-5 mm thick and irregularly curved. Very bitter in taste.

**Sunlight:** Full Sun

**Soil:** Well-drained soil

**Water:** Medium

**Temperature:** 35 degrees C

**Fertilizer:** Apply any organic fertilizer

## Caring for Kuchla

- Weeding should be done after two months of planting and whenever required.
- As the plants grow tall then no regular weeding is required.

## Typical uses of Kuchla

**Special features:** Seed is the most used part of this herb. Rarely, root bark is also used. It should be purified before using for medicinal purposes.

**Ornamental use:** The plant is used for an ornamental purpose.

**Medicinal use:** Taking nux vomica for more than a week, or in high amounts of 30 mg or more, can cause severe side effects like restlessness, dizziness, back stiffness, spasms of jaw and neck, convulsions, seizures, wheezing, breathing problems, liver failure and deat.
