Description

Description for Lilium Lancifolium, Tiger lily (Red)

The flowers of this perennial can grow up to three inches in width. The Tiger Lily is also known as the Ditch Lily as it is found in and around ditches in large parts of America. The tiger lily plant can reach several feet tall, and while the stems are usually stiff and sturdy, a slender stake occasionally helps provide an upright appearance and support for multiple flowers. Tiger lilies are highly toxic to cats.

Common name Lilium lancifolium or Lilium tigrinum)	Flower colours Red	Bloom time Summer.	Height 3 to 4-foot	Difficulty Easy.

Planting and care

Plant bulbs in groups of at least three, 8 to 10 inches apart and 4 to 6 inches deep for the bigger bulbs. Plant bulbils and very small bulbs no more than 2 inches deep. Because tiger lilies often vector lily mosaic virus, it's best to keep them isolated from other lilies. Early to mid-autumn is the best time to plant out the bulbs in cool temperate areas, in warmer areas they can be planted out as late as late autumn.

Sunlight Full sun to partial shade. but allows the flowers to bloom in full sun.	Soil Well-drained soil. To ensure proper drainage, you may need to amend the soil prior to planting. Amending the soil around tiger lily flowers is as simple as adding compost or humus. Peat moss, sand or straw mixed into the beds are other ways to improve drainage and retain appropriate moisture.	Water Plenty of water but no standing water.	Temperature Warm temperature.	Fertilizer Fertilizer is not needed except for the poorest of soils.
