Description *Livistona chinensis*, the Chinese fan palm or fountain palm, is a species of subtropical palm tree in eastern Asia. It is native to Southern Japan, Taiwan, the Ryukyu Islands, and the Guangdong region of southern China. It is also reportedly naturalized in South Africa, Mauritius, Réunion, the Andaman Islands, Java, New Caledonia, Micronesia, Hawaii, Florida, Bermuda, Puerto Rico and the Dominican Republic

Common name: Chinese fan palm

Color: White

Bloom time: early summer

Height: 30 ft (9 m).

Difficulty level: easy to grow

Planting & Care

The deep planting encourages the developing stem to send out roots to help stabilize the plant and perhaps eliminate the need for staking. Also, deep planting keeps lily bulbs cool when temperatures soar.

Sunlight: Full Sun

Soil: well-drained soil

Water: Medium

Temperature: 16C

Fertilizer: Apply any organic fertilizer

Care:

- Growing plants can be inexpensive, particularly when growing them from seed.
- Seeds of plants flowers should usually be sown directly into the sunny flower bed, as developing roots do not like to be disturbed.

Care:

- Apply a high-potassium liquid fertilizer every 2 weeks from early spring until 6 weeks after flowering.
- Keep moist in winter.

Special Feature:

The palm is cultivated as ornamental trees in gardens and conservatories. This plant can become a weed, or in some ecosystems an invasive species - such as in Florida wetlands and on some Caribbean Islands.

Use

Note:

Caterpillars, mealybugs, and spider mites also cause problems. Avoid spraying and tolerate some leaf damage unless the situation is uncontrolled.
