Description

Description for Longan, Lichi

Dimocarpus longan, commonly known as the longan, is a tropical tree that produces edible fruit. It is one of the better-known tropical members of the soapberry family, to which the lychee also belongs. It is native to Southern Asia

Common name	Flower colours	Bloom time	Height	Difficulty
Dimocarpus longan	Light brown	April	30.00 to 40.00 feet	Easy to grow

Planting and care

Fertilize longan trees with a balanced 5-5-5 fertilizer every two months, beginning with 1/4 pound fertilizer one month after planting. Spread the fertilizer over the soil from the trunk to the drip line and water thoroughly.

Sunlight	Soil	Water	Temperature	Fertilizer
Full sun to part shade	well-drained soil	Medium	22 degrees	Apply any organic fertilizer

Caring for Longan

- Longan trees thrive in warm climates, but tolerate temperatures down to 22 degrees Fahrenheit for brief intervals.
- Plant the longan trees in the sunniest, highest, and driest part of the garden, as they require well-drained soil
- Even a few days of waterlogged soil can kill longan trees. In a container garden, the trees grow 7 to 10 feet tall, while trees in the yard grow 15 to 25 feet tall.

Typical uses of Longan

Special features: Grown for fruit, ornamental use and as shade tree.

Ornamental use: The plant is used for ornamental purpose. Its generally kep indoor in living room and in terrac area.

Medicinal use: Stomach problems such as infections & pain,
