Description

Description for Lucky Bamboo 4 Layer Pyramid

Sacred Bamboo is a woody shrub, native to China and Japan, often used in landscaping. Its distinctive double-compound or triple-compound leaves which have lance shaped leaflets are held on multiple nonbranching stems.

Common name	Flower colours	Bloom time	Height	Difficulty
Sacred Bamboo, Heavenly Bamboo, Nandina	-	annual	1.5-4 ft.	easy to grow

Planting and care

An accurate soil test will tell you where your pH currently stands. Acidic (sour) soil is counteracted by applying finely ground limestone, and alkaline (sweet) soil is treated with ground sulfur. If you order roses from a mail-order company, order early, in January or February (March at the latest). They are usually shipped in the spring as bare roots when plants are fully dormant, well before they have leafed out

Sunlight	Soil	Water	Temperature	Fertilizer
Requires shade	well-drained soil	Water the plant once a week	59 to 77 Å°F	Apply any organic fertilizer

Caring for Lucky Bamboo 4 Layer Pyramid

Start with pruning shears for smaller growth. Use loppers, which look like giant, long-handle shears, for growth that is more than half an inch thick. A small pruning saw is handy, as it cuts on both the push and the pull.

Typical uses of Lucky Bamboo 4 Layer Pyramid

Special features: Young are shoots smooth, light purple or purplish green, ligule with long hairs, soon falling off, blades linear, green. Leaves are 15-30 cm long, 2.5-5 cm broad, oblong lanceolate, tip long-pointed.

Culinary use: na

Ornamental use: The plant is used for ornamental purpose

Medicinal use: na

I am staying in Bangalore so delivery time may damage the plant?

Anieha Jacob

Thursday, 17 August 2017

Broken stems and spilled soil brought the plant in irreparable condition,with yellowing blackening leaves and smell in the soil
