Description

Description for Madhumalti Dwarf, Rangoon Creeper

Tender plants are reddish in color. As they grow, the normal green color appears. In a mature creeper, the stem becomes woody and thorns appear. Once established, it hardly dies.

Clusters of fragrant white pendulous trumpets open white then change to pink, red and finally a deep maroon. This plant needs support for growing and is very useful in covering fences, supports, and walls.

Under good growing conditions, it is typically seen with lush and fresh green foliage or cascading branches with numerous axillary and terminal drooping racemose inflorescence that is simply spectacular.

Common name	Flower colours	Bloom time	Height	Difficulty
Rangoon Creeper, Burma creeper, Chinese honeysuckle, Madhu Malati	Clusters of fragrant white pendulous trumpets open white then change to pink, red and finally a deep maroon.	February to May and August to November	Creep 2.5 to 8 meters	Easy

Planting and care

The growth rate is generally fast, and the plant does not make heavy fertilizer demands. Rangoon creeper does like medium to bright light. Under good conditions it will be necessary to prune the plant to keep it in bounds. Rangoon creeper is found in thickets or secondary forests of the Philippines, India and Malaysia. It has since been cultivated widely in the gardens as an easy to grow plant.

Sunlight	Soil	Water	Temperature	Fertilizer
Prefers full to part sun and blooms best with good sunlight.	Well drained soil	Keep the soil moist	Warm	-

Caring for Madhumalti Dwarf

The plant requires regular pruning to keep it within control, as well as to encourage more blooms with new branches as flowers appear on new growth.

Typical uses of Madhumalti Dwarf
