Description

**With this purchase you will get:**

01

Mandevilla (Red) Plant

01

6 inch Grower Round Plastic Pot (Black)

## Description for Mandevilla (Red)

**Plant height:** 14 - 23 inches

**Plant spread:**

The very showy flowers have white and gold throats and are up to 10 cm across and arranged in racemes. Mandevilla blooms heaviest in summer and sporadically throughout the rest of the year. This vine's fuzzy young stems twine around supports, eventually scrambling to heights up to 10 ft. The handsome leathery leaves are dark green.

**Common name(s):** Mandevilla, rocktrumpet

**Flower colours:** Red

**Bloom time:** Heaviest in summer and sporadically throughout the rest of the year

**Max reachable height:** 3 to 10 feet

**Difficulty to grow:** Moderate to grow

## Planting and care

Mandevilla is a tender woody vine much beloved by gardeners in warmer climates. The Mandevilla plant is often thought of as an annual but, in fact, it is very frost tender perennial. Once temperatures go below 50 degrees F (10 degrees C), you can bring your Mandevilla plant indoors for the winter. Small trellises are usually inserted in the containers for the plants to grow upon.

**Sunlight:** Full Sun to Partial Shade

**Soil:** Well-drained soil

**Water:** Medium

**Temperature:** 55 degrees F/13 degrees C

**Fertilizer:** Apply any organic fertilizer

## Caring for Mandevilla

- Plant the vines in a warm spot that receives dappled sun throughout the day or where it is protected from the midday sun. Mandevillas

require regular watering.

- The soil should be evenly moist, but never wet and never allowed to dry out. Provide the plants 1 inch of water when the soil is dry to a depth of 2 inches. When your mandevilla is young, pinch back the vines at a leaf axis throughout the spring.
- A leaf axis is a point on a stem where the leaf buds out. Pinching your Mandevilla at this point sends signals to the plant to produce a new branch and creates a fuller vine.
- As your Mandevilla matures, prune out any dead vines or vines that are rubbing against other vines. Mandevilla's problem pests include scale insects, mealybugs, red spider mites, and whiteflies.
- If your leaves of vine develop brown or yellow spots, appear dried out or lack vigor, examine the upper and underside of the leaves closely. Mandevilla will not tolerate temperatures lower than 45 degrees Fahrenheit.
- In areas where winter temperatures get lower than 45 degrees F, Mandevilla can be grown as an annual or can be brought inside to wait out the winter. Planting your Mandevilla in a container makes moving the plant inside easier.
- Mandevilla flowers need sandy, well-draining soil with plenty of organic material mixed in. A good soil mix for Mandevilla plants includes two parts peat moss or potting soil to one part sand of builder.
- When you bring your Mandevilla flowers indoors, be sure to check the plant carefully for pests and treat these pests before bringing the plant indoors. You may want to cut back the plant by up to one-third.

## Typical uses of Mandevilla

**Special features:** In Zones 10-11, this is an outstanding vine for trellises, arbors, pergolas, fences or poles. In St. Louis, it is an outstanding container plant or greenhouse plant that can also be grown as an annual. Excellent on sunny patios or decks.

**Culinary use:** NA

**Ornamental use:** The plant is used for an ornamental purpose. Cultivars are available in various colors and also double forms.

**Medicinal use:** NA

Wednesday, 27 June 2018

Pot seems to be really small. DO I have to shift the plan to the bigger pot as it starts growing in a few months?
