Description Menispermum canadense is a flowering plant in the family Menispermaceae, native to eastern North America, from southern Canada south to northern Florida, and from the Atlantic coast west to Manitoba and Texas

Common name: common moonseed

Color: Greenish-white

Bloom time: May to July

Height: 8.00 to 20.00 feet

Difficulty level: easy to grow

Planting & Care

Winter hardy to USDA Zones 5-8 where it is best grown in sandy, moderately fertile, medium moisture, well-drained soils in full sun to part shade. Avoid full sun in hot summer climates. Plants grow well in sun dappled conditions. Plants spread by rhizomes.

Sunlight: Full Sun

Soil: well-drained soil

Water: medium

Temperature: -5 to -10°C

Fertilizer: Apply any organic fertilizer

Care:

- This vine will typically grow to 8-20 long when twining its way through shrubs, lower tree branches, hedgerows or other types of vegetation.
- Where no support structures are available, it will spread an indefinite length along the ground forming a dense ground cover rising to 12" tall.
- It is native to woods,

Special Feature:

Typically grown as a twining vine on a support structure. May be grown along the ground as a ground cover (infrequently done for ornamental reasons) in woodland areas, cottage gardens or naturalized areas. Also helps prevent soil erosion on banks.

Use

Medicinal use:

- stomachic and tonic.

Ornamental use:

- The plant is used for ornamental purpose

Note:

for medicinal use, please consult appropriate doctor before use.
