Description

## Description for Milk Thistle

The plant is an erect annual with simple branches. One particular feature about this sow thistle is that most of the plant is smooth and glabrous - without any hair or bristles. The stem is hollowed, and have a milky sap and its lower part usually gets a purple-brown colour later in spring. The leaves differ according age.

Common name	Flower colours	Bloom time	Height	Difficulty
Silybum marianum	purple-brown colour	July to August	3.00 to 5.00 feet	easy to grow

## Planting and care

When starting off outdoors the seeds of Silybum species such as milk thistle should be sown at a depth of 3 mm either in early summer (Silybum biennials) or just after the last frost of spring (annual Silybum).

Milk thistles can grow in either sunny or lightly shaded areas of the garden and the soil type is not to important. If starting Milk thistle off indoors then do so about two months before they are due to be transplanted outdoors (transplant biennials in late summer).

Sunlight	Soil	Water	Temperature	Fertilizer
Full sun	well-drained soil	Medium	60Â°F	Apply any organic fertilizer

## Caring for Milk Thistle

It is easy to look after Milk thistle and other members of the Silybum plant genus; They can tolerate dry ands wet soils, so just let them be. However they may become weedy, so it is best to deadhead the flowers before they set seed, and to remove any unwanted thistle plants.

## Typical uses of Milk Thistle

**Special features:** The name "milk thistle" comes from the more obvious features of the plant, both the milk-like splotches of white covering the leaves of the plant, as well as its .

**Culinary use:** Milk thistle has very attractive white-veined dark green leaves and purple flowers, but its biennial growth pattern and inclination to spread aggressively make it difficult for placement in gardens.

**Ornamental use:** plant presenting decorative leaves with ... The plant is sometimes also used as a decorative element in gardens, and its dried flower heads may be used for the decoration of dry bouquets.

**Medicinal use:** Plant is useful in liver diseases. Leaves and roots are used in indigestion as febrifuge; stem is used as sedative, tonic; root extract is used in ointments for ulcers and wounds. Gum produced by evaporating latex is used for ascites and hydrothorax.
