Planting and care

Planting season of the thuja is in the monsoon and spring season. This plant easily grows in the pot and ground. The potted plant requires fertilizer once in a month. Prune the plant in the spring season.

Sunlight: Full Sun to Partial Shade

Soil: Sandy loam soil

Water: Moderately

Temperature: 20 to 35 degree C

Fertilizer: Apply any organic fertilizer

Caring for Morpankhi

- Water a plant when the soil feels dry to touch. Water thoroughly in the summer and reduce watering for the winter & rainy season.
- Try to water the plants in the morning around 8-10am.
- You should remove dead, infected or damaged plant parts and throw in the garbage collector.
- You should prune and fertilize a plant mostly in the spring season.
- When a plant grows beyond its limit and pot size not providing enough space for the spread of roots, re-pot with fresh soil and some fertilizer.
- While re-potting, try not to disturb the roots. Avoid any drastic change in the provided environment otherwise, the plants may get stress/shock.
- For any insect attack or disease, you can use Neem oil, Eucalyptus oil or Citrus oil spray for primary treatment.

Typical uses of Morpankhi

Special features: The main difference is that Morpankhi has all leaves and branchlets in one plane.

Ornamental use: The plant is used for an ornamental purpose.
