Description

### Description for Multivitamin,Thavasi Keerai

Easily grown in average, medium moisture, well-drained soil in full sun to part shade. Best in fertile, slightly acidic, moist soils in full sun. Grows poorly in compacted, poorly drained soils. Intolerant of road salt. Generally intolerant of urban pollution.

Common name	Flower colours	Bloom time	Height	Difficulty
Manny, Moe, Jack, Niacin	Greenish	April	60 to 75 feet	Easy to grow

### Planting and care

The vining varieties require a support structure as some can get 15 feet tall. All plants prefer sun to light shade sites with well-draining and moderately fertile soil. Install the plant in the ground at the same level it was growing in the nursery pot. Most plants are grafted onto the common rootstock because of its superior hardiness.

Sunlight	Soil	Water	Temperature	Fertilizer
Full sun to part shade	Well-drained soil	Medium	70 degrees F	Apply any organic fertilizer

### Caring for Multivitamin

- Soak the entire root zone at least twice a week in dry summer weather.
- Avoid frequent shallow sprinklings, which won't reach the deeper roots and may encourage fungus.
- Plants do best with 90 inches of rain per year, so unless you live in a rain forest, water regularly.

## Typical uses of Multivitamin

**Special features:** Excellent specimen tree for the lawn or parks with beautiful fall color. May be used as a street tree as long as it can be located on a street and in a location where road salt, soil compaction and pollution will not be significant problems.

**Ornamental use:** The plant is used for ornamental purpose.
