Description Myrica pensylvanica, the northern bayberry, is a species of Myrica native to eastern North America, from Newfoundland west to Ontario and Ohio, and south to

**Common name:** bayberry

**Color:** Yellowish green

**Bloom time:** May

**Height:** 5.00 to 10.00 feet

**Difficulty level:** easy to grow

**Planting & Care**

Easily grown in average, dry to medium, well-drained soil in full sun to part shade. Prefers moist, peaty or sandy, acidic soils, but tolerates a wide range of soils and growing conditions, including drought, poor soils, wet soils, high winds and salt spray (seashore or road salt conditions)

**Sunlight:** Full Sun

**Soil:** well-drained soil

**Water:** medium

**Temperature:** 2° 9

**Fertilizer:** Apply any organic fertilizer

**Care:**

- A mostly dioecious shrub (male and female flowers appear in separate catkins on separate plants).
- Neither catkin is showy, with only the male flowers displaying color (drab yellowish-green).
- Flowers on female plants, if pollinated, are followed by attractive clusters of tiny, grayish-white fruits in late summer which usually persist through the winter, but are not particularly showy.

**Special Feature:**

Best in groups or massed. A versatile shrub that can be used in woodland gardens or shrub borders, as a screen or informal hedge, in wet or

shady sites, or on a bank for erosion control.

Use

**Medicinal use:**

- Ayurveda,

**Ornamental use:**

- The plant is used for ornamental purpose.
- 

**Note:**

for medicinal use, please consult appropriate doctor before use.
