Description The stem is erect in young plants, but becomes creeping or trailing with age. It can hang very low and become floppy. The stem is slender, branching, and sparsely to densely prickly, growing to a length of 1.5 m (5 ft).

Common name: shameplant, touch-me-not, muttidare-muni,

Color: pink

Bloom time: summer

Height: 2 foot tall

Difficulty level: easy to grow

Planting & Care

The leaves also close under various other stimuli, such as touching, warming, blowing, or shaking. These types of movements have been termed seismonastic movements. The stimulus is transmitted via action potentials to the pulvini of the plant, where contractile proteins and aquaporins induce the movement of water and electrolytes out of the cell.

Sunlight: Full Sun

Soil: well-drained soil

Water: Medium

Temperature: 18 to 21 °C

Fertilizer: Apply any organic fertilizer

Care:

- Growing plants can be inexpensive, particularly when growing them from seed.
- Seeds of plants flowers should usually be sown directly into the sunny flower bed, as developing roots do not like to be disturbed.

Care:

- Apply a high-potassium liquid fertilizer every 2 weeks from early spring until 6 weeks after flowering.
- Keep moist in winter

Special Feature:

It is not known exactly why *Mimosa pudica* evolved this trait, but many scientists think that the plant uses its ability to shrink as a defense from herbivores. Animals may be afraid of a fast moving plant and would rather eat a less active one. Another possible explanation is that the sudden movement dislodges harmful insects.

Use

Note:

Luckily, plants are deer-resistant, so they might help keep nearby flowers from being eaten.
