Description

### Description for null

The pomegranate, botanical name *Punica granatum*, is a fruit-bearing deciduous shrub or small tree in the family Lythraceae that grows between 5 and 8 m tall.

Common name	Flower colours	Bloom time	Height	Difficulty
<i>Punica granatum</i>	Orange-red	June to September	2 ft to 10 ft	Moderately easy

### Planting and care

Heat should be second on your pomegranate seed care list.

These seeds will germinate at normal room temperature in about 30-40 days.

Bring the soil temperature up a few degrees and you can cut this time in half.

Try surrounding your plant with foil and placing it in direct sun until the seedlings sprout.

Sunlight	Soil	Water	Temperature	Fertilizer
Full sun, Partial sun	Loamy soil	Dry to medium	40 to 50 degrees C	Apply any organic fertilizer

### Caring for Ornamental Pomegranate Plant

- Pomegranates need full sun.
- Keep an eye on the weather report and if temps threaten to drop below 40 degrees F. (4 C.), move the plant indoors to a sunny window.
- Water the tree deeply about once a week, possibly more often during peak summer months. Fertilize the tree with half cup of 10-10-10.

## Typical uses of null

**Special features:** Cottage gardens, wild gardens, meadows, prairies and naturalized areas. Good fresh cut or dried flower.

**Ornamental use:** The plant is used for ornamental purpose. It can be kept indoor in living room and terrace area.
