Description

Description for Oxalis corniculata

Oxalis corniculata, the creeping woodsorrel, also called procumbent yellow-sorrel or sleeping beauty, resembles the common yellow woodsorrel, Oxalis stricta.

Common name	Flower colours	Bloom time	Height	Difficulty
Oxalis corniculata	yellow	Spring-Summer	12-18 in.	easy to grow

Planting and care

Select a sunny or partially shady outdoor planting site. Mix a 3- to 6-inch layer of organic matter such as compost, well-aged cow manure and sphagnum peat moss into the planting site.

Mix it in thoroughly to a depth of 10 to 12 inches with a rototiller or shovel.

Plant wood sorrel bulbs or rhizomes in the prepared soil in fall. Dig planting holes ½ to 1 inch deep and 4 to 6 inches wide with a hand trowel. Space holes for multiple plantings 6 inches apart.

Sunlight	Soil	Water	Temperature	Fertilizer
Full Sun to Partial Shade	well-drained soil	Medium	25 ± 2 °C.	Apply any organic fertilizer

Caring for Oxalis corniculata

- Place three or four wood sorrel bulbs or rhizomes into each hole.
- Push loose, prepared soil over the bulbs or rhizomes until the top of the soil is level with the surrounding garden soil.
- Water the placed you planted bulbs or rhizomes to settle the soil.
- Water the planting site when its soil begins to dry. After the plants grow and have healthy stems and leaves, give them an application of 20-10-20 or 15-15-15 fertilizer once per week.
- Allow the soil to dry, and do not fertilize the wood sorrel plants if they become dormant.
- Some wood sorrel species become dormant and appear dead for as long as three months up to four times per year.

- Resume watering and fertilizing after new stems and leaves appear on the wood sorrel plants.

Typical uses of Oxalis corniculata

Special features: They usually bloom in spring and fall, producing pink, purple, red, white or yellow flowers.

Ornamental use: The plant is used for ornamental purpose
