Description

Description for Passiflora Incarnata (Purple), Krishana Kamal

Grow in average, medium moisture, well-drained soil in full sun to part shade. Tolerant of drought. Roots appreciate a loose mulch. The flower is complex, about 10 cm diameter, with the five sepals and petals similar in appearance, whitish in colour, surmounted by a corona of blue or violet filaments, then five greenish-yellow stamens and three purple stigmas. It is said that passionflower got its name because its corona resembles the crown of thorns worn by Jesus Christ during the crucifixion. It symbolizes Christ's suffering on the cross. It is more commonly known as the crown of thorns. This flower also resembles a rakhi which is worn on the wrist of every brother on Raksha Bandhan festival all over India as the symbol of a sister's love for her brother.

Common name	Flower colours	Bloom time	Height	Difficulty
Wild passion flower	White with purple crown	July to September	1.00 to 5.00 feet	Easy to grow

Planting and care

Passiflora incarnata derived the early common name of Maypop from the way it just seems to pop out of the ground in May. Maypops were eventually renamed as the Passion Flower by missionaries in the early 1500s, The missionaries believed (or professed) that

several parts of the plant, including the petals, rays, and sepals, symbolized features of the crucifixion of Christ.

Sunlight	Soil	Water	Temperature	Fertilizer
Full sun, Partial sun	Well-drained soil	Keep soil moist throughout the growing season	20 Å°F	Apply any organic fertilizer

Caring for *Passiflora Incarnata*

- Passion flowers are considered to be hardy in USDA zones 5-9, but they should be planted in a protected location and mulched heavily if severe cold threatens.
- Only the top growth is killed back by frost, but your Passion Flower will pop back to life in the Spring.
