

## Peace Lily, Spathiphyllum - Plant

Peace Lilies are very common houseplants because they are easy to grow. They can grow up to 16 inches, but larger ones can often reach 6 feet tall. Peace Lilies produce white flowers in the early summer and continue to bloom throughout the year.

Description

## Description for Peace Lily, Spathiphyllum

Peace Lily, is a very popular indoor houseplant. It is a clump-growing herbaceous perennial which produces white flowers which look like the hood of a cobra.

Leaves are shiny and glossy, attractive even with no spathes.

Common name	Flower colours	Bloom time	Height	Difficulty
Spathiphyllum wallisii	White	Flowers freely	1.00 to 6.00 feet	Easy to grow

## Planting and care

Plant with an all-purpose potting soil and keep it lightly moist throughout the year. Repotting annually in the spring is good for the lily because it will need refreshed soil.

Sunlight	Soil	Water	Temperature	Fertilizer
Part shade to full shade	well-drained soil	Medium	(18-24°C (64-75°F))	Apply any organic fertilizer

## Caring for Peace Lily

- Keep the soil moist at all times, but do not overwater.
- During the winter fertilize every 6 weeks or so.
- If you want flowers to appear, but none have, move the plant to a darker room.
- water at least once a week or allow the soil to almost dry before watering again

## Typical uses of Peace Lily

**Special features:** The Peace Lily is no different, if you put it in a bright spot without direct sunlight, growth will be rapid and robust. Of course as the common stereotype states, it will survive, adapt and grow (albeit slowly) even if you pick a darker spot in your home for it instead.

**Ornamental use:** Peace lilies are sturdy plants with glossy, dark green oval leaves that narrow to a point. The leaves rise directly from the soil. These plants also periodically produce lightly fragrant white flowers that resemble calla lilies. The long-lasting flowers start out pale green and slowly turn creamy white as they open.

**Medicinal use:** Peace lilies are among the top houseplants used to purify the air. According to the University of Minnesota Extension while all plants absorb carbon dioxide and release oxygen as part of the photosynthesis process, peace lilies also absorb airborne pollutants such as benzene, formaldehyde and trichloroethylene.

## Reviews

Saturday, 16 September 2017

I just received this plant. It comes with its own pot. It's beautiful and in great condition!

Sakshi Goel

Friday, 15 September 2017

According to NASA, this plant has capability to absorb pollutants like benzene and purifies the air, which in turn induces a good sleep.
