Peace Lily, Spathiphyllum Plant

01

5 inch Grower Round Plastic Pot (Black)

Description for Peace Lily, Spathiphyllum

Plant height: 5 - 9 inches

Plant spread: 4 - 6 inches

Peace Lily, is a very popular indoor houseplant. It is a clump-growing herbaceous perennial which produces white flowers which look like the hood of a cobra. Leaves are shiny and glossy, attractive even with no spathes.

Peace lilies are sturdy plants with glossy, dark green oval leaves that narrow to a point. The leaves rise directly from the soil. The long-lasting flowers start out pale green and slowly turn creamy white as they open.

Common name(s): Peace lily, Cobra plant

Flower colours: Creamy-White

Bloom time: Spring or early summer

Max reachable height: 1 to 6 feet

Difficulty to grow: Easy to grow

Planting and care

The soil for the peace lily should be kept moist but not soggy. Let the soil dry between waterings, but do not allow to wilt; this causes the leaves to yellow. When watering, use water that is at room temperature and has been allowed to sit so that the chlorine can evaporate. Plant with an all-purpose potting soil and keep it lightly moist throughout the year. Repotting annually in the spring is good for the lily because it will need refreshed soil.

Sunlight: Part shade to full shade

Soil: Well-drained soil

Water: Medium

Temperature: 18 to 24 degrees C (64 to 75 degrees F)

Fertilizer: Apply any organic fertilizer

Caring for Peace Lily

- Peace lilies should be re-potted when the root growth has overfilled the container.
- Use a humus rich potting soil to repot the peace lily.
- To help the roots to retain soil and prevent the root tearing, re-pot the plant when the soil is somewhat moist.
- Keep the soil moist at all times, but do not overwater.
- During the winter fertilize every 6 weeks or so.
- If you want flowers to appear, but none have, move the plant to a darker room.

Harvesting

NA

Typical uses of Peace Lily

Special features: The Peace Lily is no different, if you put it in a bright spot without direct sunlight, growth will be rapid and robust. Of course as the common stereotype states, it will survive, adapt and grow (albeit slowly) even if you pick a darker spot in your home for it instead.

Culinary use: NA

Ornamental use: Peace lilies are sturdy plants with glossy, dark green oval leaves that narrow to a point. The leaves rise directly from the soil. These plants also periodically produce lightly fragrant white flowers that resemble calla lilies. The long-lasting flowers start out pale green and slowly turn creamy white as they open.

Medicinal use: Peace Lillies are being developed for pest control for thousands of years.
