Description

Pellitory is a slender herb with weak slender branches, between 10-30 cm long. Leaves are mostly ovate, rarely narrower, mostly 1-3 cm long, 0.5-2 cm wide, thin and sometimes succulent. They are situated on slender stalks that are up to 3 cm long.

Common name: *Parietaria debilis*

Color: Green

Bloom time: August-November.

Height: 6 to 18 inches

Difficulty level: easy to grow

Planting & Care

Prune plant every spring and destroy all old or diseased plant material. Wear elbow-length gloves that are thick enough to protect your hands from thorns or a clumsy slip, but flexible enough to allow you to hold your tools. Always wear safety goggles; branches can whip back when released.

Sunlight: Full Sun to Partial Shade

Soil: well-drained soil

Water: Medium

Temperature: 13 - 16°C

Fertilizer: Apply any organic fertilizer

Care:

- An accurate soil test will tell you where your pH currently stands.
- Acidic (sour) soil is counteracted by applying finely ground limestone, and alkaline (sweet) soil is treated with ground sulfur.

Special Feature:

Flowers are crowded and borne in the leaf axils in twin, three flowered stems. Fruit is glossy, ovoid but flattened and approximately 1.5 mm long. Pellitory is found in S Ural, Caucasus, C Asia, Himalayas, Siberia, Mongolia, China, Japan, at altitudes of 2600-3900 m. Flowering: August-November.

Use

Medicinal use:

- The parts of the plant that grow above the ground are used to make medicine.
- People take pellitory-of-the-wall for fluid retention, constipation, and cough.
- They also take it for a variety of urinary tract disorders including urinary tract infections (UTIs), kidney pain, and kidney stones

Ornamental use:

- The plant is used for ornamental purpose.

Note:

for medicinal use, please consult appropriate doctor before use.
