Description

Description for Philodendron Ceylon Golden

Philodendron house plants thrive indoors year round without complaint, but they enjoy an occasional stay outdoors in a shady spot when the weather permits.

Taking the plant outdoors also gives you a chance to flush the soil with plenty of fresh water and clean the leaves. Unlike most house plants, philodendrons don't experience as much stress when moving from indoor to outdoor settings.

Common name	Flower colours	Bloom time	Height	Difficulty
Philodendron Ceylon Golden, Philodendron bipinnatifidum, Fiddle leaf philodendron, 'Gold Satin, Philodendron 'Golden Erubescens, Velvet Leaf ,	-	-	1 to 2 feet.	Easy

Planting and care

Philodendron care incorporates three basic needs: sunlight, water and fertilizer.

Use small 5 to 8 Inch pots. Use colourful pots to make the potted plant look attractive.

Sunlight	Soil	Water	Temperature	Fertilizer
They will tolerate low light, but if there is too little light, the new leaves will develop smaller, and farther apart on the stem. On the other hand,	A well drained soil with a bit of sand mixed in it. Add gravel at the bottom of the pot for good draining.	When growing philodendron plants, allow the top inch of soil to dry out between watering. The length of your index finger to the first	25 C - 35 C	Feed philodendron house plants with a balanced liquid foliage house plant fertilizer that contains macro-nutrients. Water the plant

direct sunlight will burn the foliage, and stunt the growth of the plant.

knuckle is about an inch, so inserting your finger into the soil is a good way to check the moisture level.

with the fertilizer monthly in spring and summer and every six to eight weeks in fall and winter.

Caring for Philodendron Ceylon Golden

- Set the plant in a location with bright, indirect sunlight.
- Find a position near a window where the sun's rays never actually touch the foliage.
- While it's normal for older leaves to yellow, if this happens to several leaves at the same time, the plant may be getting too much light.
- When growing philodendron plants, allow the top inch of soil to dry out between waterings.
- The length of your index finger to the first knuckle is about an inch, so inserting your finger into the soil is a good way to check the moisture level.
- Feed philodendron houseplants with a balanced liquid foliage houseplant fertilizer that contains macro-nutrients.
- Water the plant with the fertilizer monthly in spring and summer and every six to eight weeks in fall and winter.
- Slow growth and small leaf size is the plant's way of telling you that it isn't getting enough fertilizer.
- Pale new leaves usually indicate that the plant isn't getting enough calcium and magnesium, which are essential micro-nutrients for philodendrons.

Typical uses of Philodendron Ceylon Golden

Special features:

Ornamental use: A quick growing attractive climber.

Beauty of the leaves are rewarding house plant.

Used as a ground cover also, but mostly as a moss stick specimen as it can be trained along them easily.
