Description Phoenix canariensis is a species of flowering plant in the palm family Arecaceae, native to the Canary Islands. It is a relative of Phoenix dactylifera, the true date palm.

Common name: Canary Island Date Palm, Pineapple Palm, Canary Date Palm, Slender Date Palm.

Color: white to pale yellow

Bloom time: Seasonal bloomer

Height: 40.00 to 60.00 feet

Difficulty level: easy to grow

Planting & Care

Have a hose or bucket of water and all your planting tools nearby. Keep your bare-root rose in water until you are ready to place it in the ground. Plants can be cut back and moved in either spring or fall, but not in midsummer, as they might suffer and die in the heat.

Sunlight: Full sun

Soil: well-drained soil

Water: Medium

Temperature: 14 °F

Fertilizer: Apply any organic fertilizer

Care:

- The vining varieties require a support structure as some can get 15 feet tall.
- All plants prefer sun to light shade sites with well-draining and moderately fertile soil.
- Install the plant in the ground at the same level it was growing in the nursery pot.

- Most plants are grafted onto the common rootstock because of its superior hardiness.
-

Care:

- Leave the foliage until it turns brown in the fall.
- This is important so that the plant stores energy for next year's flowering.
- Cut down the dead stalks in the late fall or early spring.
- Before winter, add 4 to 6 inches of mulch, simply to delay the ground freeze and allow the roots to keep growing.
-

Special Feature:

Excellent in groves or small groupings. It can be planted on residential lawns as a specimen, but it needs a very large space. Additional residential area options include growth as a container plant on patios or near entrances. Where winter temperatures are too cool, container plants can be overwintered indoors.
