Description

Description for Pilea Nummulariifolia, Creeping Charlie

Pilea nummulariifolia is a perennial evergreen herbaceous plant commonly known as creeping charlie native to the Caribbean and northern South America. It can be grown indoors, for example in a hanging pot.

A low, trailing or creeping herbaceous perennial that is not tolerant of freezing temperatures, it is native to tropical South America and the West Indies.

Each round to oval leaf is a bright to medium glossy green with small scalloped edges. The blade has depressed veins that creates a quilted or crinkled texture. When temperatures are warm, small whitish green, but unnoticeable flowers can appear among the leaves. The sprawling, fleshy stems root at nodes where they come in contact with warm, moist soil.

Common name Creeping Jenny, Creeping Charlie	Flower colours Yellow,White, Green	Bloom time June(Indeterminate)	Height 0.25 to 0.50 feet	Difficulty easy to grow
---	---------------------------------------	-----------------------------------	-----------------------------	----------------------------

Planting and care

Plant where they will receive a minimum of 5 to 6 hours of full sun per day. Plants grown in weak sun may not die at once, but they weaken gradually. Give them plenty of organic matter when planting and don't crowd them. Wear sturdy gloves to protect your hands from prickly thorns.

Sunlight Full sun to part shade	Soil well-drained soil	Water Medium to wet	Temperature 20 and 85 degrees F	Fertilizer Apply any organic fertilizer Apply any organic fertilizer
------------------------------------	---------------------------	------------------------	------------------------------------	--

Caring for Pilea Nummulariifolia

plant care is not difficult but does require vigilance. The vines need to be trained early when they are young. You may use plant ties or just weave them through trellis sections. Fertilize the plant in spring just before new growth appears. Pinch off the tips of the vines in the second year to promote branching which will fill the trellis with bushy growth.

Typical uses of Pilea Nummulariifolia

Special features: Excellent ground cover for areas where it can be left alone to spread or naturalize, such as banks, woodland gardens, along paths, or in moist areas near water gardens or along streams, pools or ponds. Also can be planted to cover or spill over stone walls.

Culinary use: na

Ornamental use: The plant is used for ornamental purpose. Usage Bedding Plant, Container, Edging, Groundcover, Hanging Basket, Houseplant, Rock Garden / Wall, Tropical
