Bloom time: April

Max reachable height: upto 0.50 feet

Difficulty to grow:: easy to grow

Planting and care

Sunlight: Full sun to part shade

Soil: Muddy water

Water: They grow in water

Temperature: 21 C

Fertilizer: Apply any organic fertilizer

Caring for Pink Lily

- The Lotus plant should be fertilized sparingly for the first year.
- Too much fertilizer may cause the Lotus foliage to burn.
- A Lotus plant that is established can be fed every 3 or 4 weeks during the growing season.
- Care must be taken when inserting fertilizer tabs, because the growing tip and new growth can be damaged.
- It is important to protect the Lotus roots from freezing.
- Lotus can winter over in the pond if the pond depth is below the freeze line for your area.
- In late fall, the yellowed foliage should be cut off and the plant lowered to the deepest part of the pond.
- Or you may lift the tubers after the plant has died back during the fall.
- If you lift the tubers, store them in a cool, frost-free location until late spring.
- To help prevent mildew and rotting, store them in living sphagnum moss.

Typical uses of Pink Lily

Special features: Naturalize in moist soils in shaded areas of native plant gardens, shade gardens, woodland gardens or wild/naturalized areas. Also grows well in pond or stream banks or in shady areas of rock gardens.

Ornamental use: The plant is used for ornamental purpose. Its generally kep outdoor in pond.

Medicinal use: The flower is used to brew lotus teas, which relieves cardiac complications and helps to stop bleeding.
