Common name: Indian Kino Tree, Vijayasar, Malabar kino tree

Color: Yellow

Bloom time: September-October.

Height: 30 m

Difficulty level: easy to grow

Planting & Care

Potting soil used for palm plants should be well draining, and any container used for the plant should have ample drainage holes in the bottom. Soil should be moist at all times during the growing season, although it is essential to avoid over-saturation, which can lead to root rot.

Sunlight: Full Sun to Partial Shade

Soil: well-drained soil

Water: Medium

Temperature: 22 - 34°C

Fertilizer: Apply any organic fertilizer

Care:

- Seeds may also be placed in hot water and soaked overnight.
- Place seeds in a moist soil medium, cover with a light sprinkle of soil and place in a warm, bright location.

- Seeds generally take about a week to germinate, according to Guide to Houseplants.

Care:

- Allow the plant soil to dry out a little more in the winter than in the summer.
- A daily mist of water helps to keep humidity levels high.
- If frond tips become brown, the humidity is too low.
- A light fertilizer application from late winter through early fall helps fan palm plants remain vital.

Use

Medicinal use:

- Unverified information Decoction of the heartwood of asana is useful in skin diseases diabetes, anaemia and excess of kapha and obesity.
- In obesity, a decoction of the heartwood of asana should be taken mixed with honey.
- Decoction of the heartwood of asana is useful in skin diseases, diabetes, anaemia, and excess of kapha and obesity.
-
