Description Easily grown in average, well-drained soils in full sun. Although mature plants exhibit good drought resistance, plants grow best with regular moisture throughout the growing season. Extremely good heat tolerance. Sow seed directly in the garden after last frost date.

Common name: globe amaranth

Color: White

Bloom time: June to frost

Height: 1.00 to 2.00 feet

Difficulty level: easy to grow

Planting & Care

Before you plant, be sure that you choose varieties proven in your climate. When in doubt, All-America Rose Selections winners are good bets. Or check with your local nursery. If you order plants from a mail-order company, order early, in January or February (March at the latest).

Sunlight: Full sun

Soil: well-drained soil

Water: Medium

Temperature: 70 degrees F

Fertilizer: Apply any organic fertilizer

Care:

- Also, select a site that gets full sun.
- For dependable blooms, plants need six to eight hours of direct sunlight a day.
- If it's too shady, the stems will attempt to lean towards the sun or get spindly and fall over.
- Most of the popular varieties prefer acidic to neutral soil, but some are lime-tolerant or prefer alkaline soils.

Harvesting: 6-8 weeks

Care:

- Plants love water—but don't drown them.
- That is, they don't like to sit in water, and they'll die if the soil is too wet in winter.
- The ideal soil is rich and loose, with good drainage.
- One of the worst mistakes you can make is to not provide adequate drainage.
- Use mulch.
-

Special Feature:

Borders, rock gardens, cutting gardens, annual beds or containers. Also useful as an edger.
Use

Note:

for medicinal use

Very fast germination just on the third day from seeding. Happy with that but has to update the review later based on the yield. If it gives yield just as shown in the picture it will be excellent. Le
