Common name(s): Round flask green terrarium

Flower colours: NA

Bloom time: NA

Max reachable height: Up to 10 cm (Plant)

Difficulty to grow: Easy to grow

Planting and care

You should use water-soluble organic fertilizer in little quantity. Don't apply in large quantity; it will promote more vegetative growth. We maintain the small plant size in the terrarium. That's the way we should control the vegetative growth.

If there is a need of re-potting then the potting media should be as follows a one and a half inch to two-inch layer in the bottom of the container. The soil should be porous to allow good drainage. It should be slightly moist for planting. You can use equal parts of garden soil, sand, and peat moss(1:1:1).

Sunlight: Bright area with indirect sunlight

Soil: Soil, sand, and peat moss (1:1:1)

Water: Sparingly

Temperature: 20 to 25 degree C

Fertilizer: Liquid fertilizer

Caring for Round flask green terrarium

- Prune the tips of the plant to create a bushier plant.
- Remove fallen leaves from the terrarium.
- Spray the water once in the fortnight with spraying bottle on the soil.
- Avoid spraying on the plants.
- This terrarium container don't have the drainage hole or holes, avoid application of large quantity water.
- Give it bright with indirect sunlight or near artificial light sources.
- The soil should not be saturated or soggy as this condition will lead to rotting.
- The glass walls should allow the light to reach the plants and it should be clean from dust, drafts, and temperature changes.
- If there is too much moisture on the inner side of the container that you cannot see your plants, then open the lid for temporarily to allow it to dry.
- Avoid too much direct sunlight to the container; it may burn the plants and the glass container may get very warm.
- You can allow the terrarium to receive fresh air from an open window.
