Description

Description for Sagargota

Easily grown in average, medium moisture, well-drained soils in full sun to light shade. Best flowering occurs in full sun. Prefers rich, light soils. Tolerates a wide range of soils, however, including poor ones.

Common name	Flower colours	Bloom time	Height	Difficulty
Fever nut, Bonduc nut	Pink	June to July	20.00 to 40.00 feet	easy to grow

Planting and care

plant care may require a bit of effort, but the results are well worth the work. Not all plants are fragrant, but the most common and hardy do produce a sweet, carrying fragrance. Common is a vine and has larger glossy green leaves than Royal. Both can survive in temperate climates if they are planted in a sheltered area.

Sunlight	Soil	Water	Temperature	Fertilizer
Full sun to part shade	well-drained soil	Medium	40-45 F	Apply any organic fertilizer

Caring for Sagargota

Plant care is not difficult but does require vigilance. The vines need to be trained early when they are young. You may use plant ties or just weave them through trellis sections. Fertilize the plant in spring just before new growth appears.

Typical uses of Sagargota

Special features: Generally considered to be an attractive but inferior landscape tree. May be used as a lawn accent in areas where soils are poor or alkaline. Avoid planting in areas where wilt is a problem.

Ornamental use: The plant is used for ornamental purpose.
