Description In animal study, carvacrol found in Satureja spp. exhibited a significant hypolipidemic effect with decreased levels of total cholesterol, phospholipids

Common name: Thymus biflorus, Satureja biflora

Color: purple

Bloom time: all year.

Height: 15–50 cm

Difficulty level: easy to grow

Planting & Care

Lemon Savory is a low growing shrubby herb. Stems are ascending-erect, unbranched, slender, 10-30 cm, hairless, velvety or hairy. Leaves are narrowly to broadly ovate, thickish-textured, entire, pointed, 5-10 mm long, 3-5 mm broad, with a prominently thickened marginal vein extending all round the leaf. Leaves are gland-dotted below, stalkless or almost so. Verticillasters few-flowered, rather lax. Bracts are small, linear.

Sunlight: Full Sun

Soil: well-drained soil

Water: medium

Temperature: 40–240 °C

Fertilizer: Apply any organic fertilizer

Care:

- Flower- stalks are erect-spreading, 1-3 mm.
- Sepal cup is narrow tubular, 3-4 mm, prominently ribbed, with spreading hairs, teeth slightly unequal, narrow triangular-linear, up to 1.5 mm; tube bearded at throat.
- Flowers are rose to mauve, 6-7 mm.
- Upper lip is notched, lower lip longer than upper.
- Stamens do not protrude out.

-

Special Feature:

with spreading hairs, teeth slightly unequal, narrow triangular-linear, up to 1.5 mm; tube bearded at throat. Flowers are rose to mauve, 6-7 mm. Upper lip is notched, lower lip longer than upper. Stamens do not protrude out.

Use

Culinary use:

- leaves

Ornamental use:

- The plant is used for ornamental purpose

Note:

for medicinal use, please consult appropriate doctor before use
