Description

Description for Sedum Spurium Voodoo, Sedum Spurium Dragon's blood

It is a great plant to grow to attract honeybees and butterflies to the garden; it is resistant to rabbits and deer; looks good in a rock garden, at the front of borders, or in a container; helps to maintain soil structure; and is drought tolerant.

Common name	Flower colours	Bloom time	Height	Difficulty
Caucasian stonecrop	Pink	August to September	0.25 to 0.50 feet	easy to grow

Planting and care

Sedum spurium prefers a hot, dry, sandy, poor soil. Does not tolerate excessive moisture so good drainage is essential; it may be necessary to grow on a slope.

In the spring, place the seeds in a compost containing container, wrap in a plastic bag and refrigerate for three weeks. Next, plant the container into the ground in a shady location beneath glass. Transplant seedlings to their final location as they emerge.

Sunlight	Soil	Water	Temperature	Fertilizer
Full sun	well-drained soil	Dry to medium	15 C - 30 C	well-drained soil

Caring for Sedum Spurium Voodoo

- May overtake alpine plantings, so cut back to stop it smothering other plants.

- Cut back to ground level in the autumn.
- Susceptible to fungal disease if over watered. Can attract slugs, snails, and scale insects.

Typical uses of Sedum Spurium Voodoo

Special features: Rock garden or small area ground cover. Border fronts. Stone wall pockets. Sunny banks or slopes. Edging. Along walks and foundations. Containers. Best when planted in groups or massed as a ground cover.
